EXPLANATORY NOTES

Introduction

The monthly Population Survey (which is described in *The Labour Force, Australia* (6203.0)) comprises the monthly labour force survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the May 1985 labour force survey conducted throughout Australia.

2. Of the respondents to the labour force survey, those who fell within the scope of the supplementary were asked additional questions. This subset of respondents was asked whether they were attending, or had attended in the previous year, an educational institution, and, if so, the type of educational institution and the type of attendance. If respondents were not attending an educational institution full-time in 1985 they were asked the year they finished full-time study. Persons who had left full-time study during the previous year were asked the time of the year they had left. In respect of apprentices, information was obtained on their year of apprenticeship and field of trade.

Scope

3. The scope of this supplementary survey was the same as that used for the labour force survey (described in full in *The Labour Force, Australia* (6203.0)) except that it was restricted to persons aged 15 to 64 and excluded persons permanently unable to work, some patients in hospitals and sanatoria and inmates of reformatories, jails, etc. The population for apprentices was restricted to employed persons aged 15 to 34.

Definitions

- 4. Definitions of the principal labour force categories appearing in this publication are given in *The Labour Force, Australia* (6203.0).
- 5. An educational institution is defined as any institution whose primary role is education. Included are schools, universities, colleges of advanced education, colleges of technical and further education, public and private colleges, etc. Excluded are institutions whose primary role is not education, for example hospitals.
- 6. The classification other educational institution, which is part of the variable type of educational institution attended/ing includes: business, commercial and secretarial colleges; religious and theological colleges; and overseas institutions.
- 7. Persons are regarded as attending an educational institution full-time if they consider themselves to be attending full-time or the institution which they are attending so classifies them.
- 8. A *tertiary institution* is defined as any educational institution other than a school.
- 9. Leavers from educational institutions are persons who were full-time students at some time in the previous year but were not full-time students at the time of the survey.

- 10. Apprentices include only those employed persons aged 15 to 34 who indicated in the survey that they were apprentices.
- 11. The *field of trade* is derived from information provided by apprentices on their occupation.
- 12. Unless otherwise stated, all characteristics referenced in this publication are as at the survey week.

Results of the survey

- 13. Additional tables available but not included in this publication are listed on page 18. A preliminary publication (6241.0) containing a summary of the results of the survey was issued on 23 July 1985.
- 14. Results of similar surveys, the first conducted in February 1964, have been given in previous issues of this publication. Information on apprentices was collected for the first time in May 1983.
- 15. It is proposed that this survey will next be conducted in May 1986.

Discontinuities in the series

- 16. The scope of surveys prior to 1977 was restricted to persons aged 15 to 24 and from 1977 to 1980 inclusive, 15 to 25. In 1981 the survey was expanded to include all persons aged 15 to 64. Care should therefore be exercised in comparing estimates from this survey for the persons aged 15 to 24 with those from previous surveys which relate to persons aged 15 to 25.
- 17. Since 1979, and also in 1975 and 1976, the survey has been enumerated in May. However, in 1977 and 1978 it was enumerated in August and from 1964 to 1974 in February. Care should therefore be taken in comparing estimates from this survey with those from surveys which were enumerated at different times of the year.

Reliability of the estimates

- 18. Estimates in this publication are subject to two sources of error:
 - (a) sampling error: since the estimates are based on information obtained from occupants of a sample of dwellings, they may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical note.
 - (b) non-sampling error: inaccuracies may occur because of imperfections in reporting by interviewers and respondents and errors made in the coding and processing of data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

Related publications

19. Other ABS publications which may be of interest include:

The Labour Force, Australia (6203.0)—issued monthly (\$1.20, \$2.10 incl. postage)

Labour Force Status and Educational Attainment, Australia, February 1985 (6235.0)

Labour Force Experience, Australia, During the Year Ending February 1985 (6206.0)

Persons Not in the Labour Force, Australia (6220.0)—surveyed twice yearly (March and September)

Job Search Experience of Unemployed Persons, Australia, July 1985, Preliminary (6221.0)

20. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

SUMMARY OF FINDINGS

1,897,100 persons aged 15 to 64 attended an educational institution in 1984 (837,700 or 44.2 per cent attended school while the other 1,059,500 or 55.8 per cent attended a tertiary institution). Of those who attended school in 1984, most (65.8 per cent) were still at school at May 1985, while 13.8 per cent had progressed to tertiary education. Of those who attended a tertiary institution in 1984, 528,900 (49.9 per cent) were continuing their tertiary education at May 1985. This proportion is a decrease from 52.2 per cent in the May 1984 survey.

A total of 698,300 persons who attended an educational institution in 1984 were not continuing their studies at May 1985. Of the 170,400 persons who attended school in 1984 but were not attending at May 1985, 20.8 per cent were unemployed. A much lower proportion (7.8 per cent) of persons who attended a tertiary institution in 1984 but were not attending at May 1985 were unemployed.

DIAGRAM 1. PERSONS AGED 15 TO 64 WHO ATTENDED AN EDUCATIONAL INSTITUTION IN 1984: TYPE OF EDUCATIONAL INSTITUTION ATTENDED IN 1984, WHETHER ATTENDING AN EDUCATIONAL INSTITUTION, TYPE OF EDUCATIONAL INSTITUTION ATTENDING AND LABOUR FORCE STATUS, MAY 1985

(Source of data: Tables 1, 8 and 9)

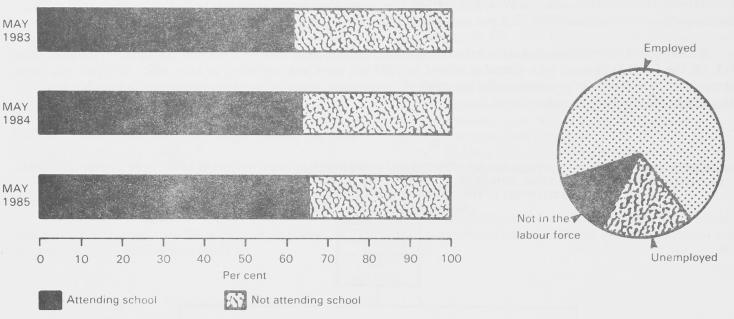

(a) Estimate subject to sampling variability too high for most practical uses.

Of the 805,700 persons aged 15 to 17 at May 1985, 527,200 or 65.4 per cent were attending school. This proportion has increased over the last two years from 61.7 per cent at May 1983. There were 278,500 persons in this age group who were not attending school at May 1985. Of these 193,100 were employed and 52,100 were unemployed—an unemployment rate of 21.2 per cent. 33,300 were not in the labour force.

DIAGRAM 2. PERSONS AGED 15 TO 17: WHETHER ATTENDING SCHOOL, MAY 1983 TO MAY 1985 (Source of data: Table 3)

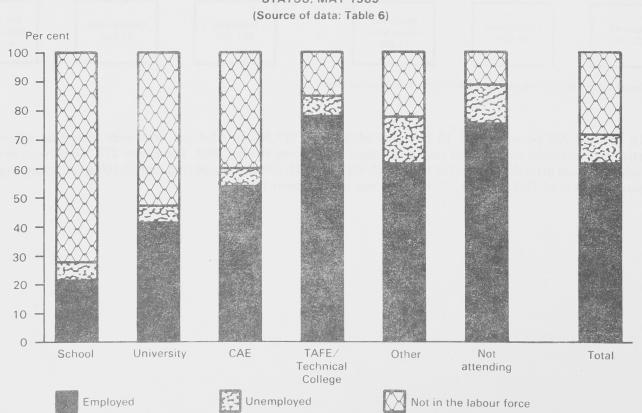

DIAGRAM 3. PERSONS AGED 15-17 WHO
WERE NOT ATTENDING
SCHOOL: LABOUR FORCE
STATUS, MAY 1985
(Source of data: Table 3)

Of the 2,593,700 persons aged 15 to 24 at May 1985, 21.3 per cent were attending school, 4.3 per cent university, 3.6 per cent Colleges of Advanced Education, 8.9 per cent TAFE or Technical Colleges and 1.3 per cent other educational institutions, while the remaining 60.5 per cent were not attending at all. Most persons in this age group were employed (61.1 per cent), while 10.7 per cent were unemployed and 28.2 per cent were not in the labour force.

A majority of persons who were attending school or university were not in the labour force, whilst a majority of persons who were attending Colleges of Advanced Education, TAFE or Technical Colleges, other educational institutions or were not attending an educational institution were employed. Those persons attending TAFE or Technical Colleges and those not attending had the highest proportions of employed persons (77.3 per cent and 74.6 per cent respectively). The largest proportions of unemployed persons were in the groups of persons attending other educational institutions and not attending at all (15.9 per cent and 13.4 per cent respectively).

DIAGRAM 4. PERSONS AGED 15 TO 24: WHETHER ATTENDING AN EDUCATIONAL INSTITUTION, TYPE OF EDUCATIONAL INSTITUTION ATTENDING AND LABOUR FORCE STATUS, MAY 1985

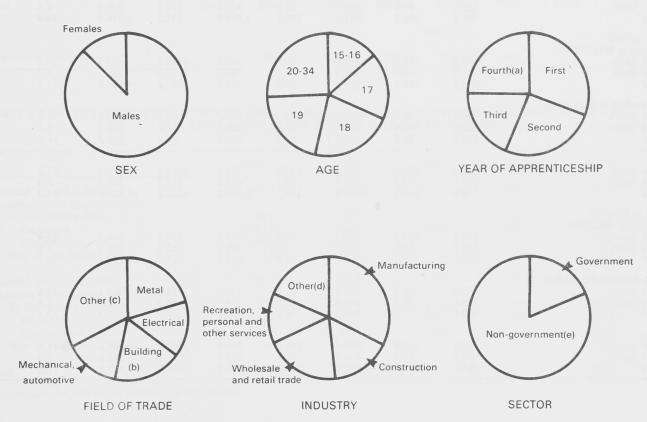

In May 1985 there were 147,800 apprentices aged 15 to 34 in training (1.2 per cent of the civilian population or 2.2 per cent of employed persons aged 15 and over). This compares with 142,000 in May 1984 and 151,100 in May 1983.

Most of these apprentices were males (87.8 per cent in May 1985). A large proportion (60.7 per cent) were aged 17 to 19 and 31.1 per cent were in the first year of their apprenticeship.

Fields of trade in which relatively large numbers of apprentices worked were metal, building, electrical and mechanical and automotive. Industries which employed many apprentices were manufacturing, wholesale and retail trade, construction and recreation, personal and other services. Over 80 per cent of apprentices were employed in the Non-government sector.

DIAGRAM 5. APPRENTICES: SUMMARY OF CHARACTERISTICS, MAY 1985 (Source of data: Tables 23 and 24)

(a) Includes a small number of fifth year apprentices. (b) Includes furniture making. (c) Includes service; food and drink; printing; and footware, clothing and textiles. (d) Includes electricity, gas and water; transport and storage; communication; community services; agriculture, etc.; mining; finance, property and business services; and public administration and defence. (e) Includes a small number of persons for whom sector could not be determined.

(a) Includes furniture making. (b) Includes footwear, clothing and textiles. (c) Comprises persons who left school at age 10 to 14 or 20 to 24 and persons aged 25 to 34 who were not asked the age at which they left full-time education. (d) Comprises persons aged 25 to 34. (e) Includes agriculture, etc.; mining; finance, property and business services; and public administration and defence. (f) Includes a small number of persons for whom sector could not be determined.

ADDITIONAL TABLES

The following is a list of additional tables of results from the survey which are available to users on request. These tables show a selection of estimates on an Australia-wide basis. Tables disaggregated by State/Territory and other tables may also be available. Most tables are dissected by sex.

Persons aged 15 to 64-

Whether attending an educational institution, type of educational institution attending and type of attendance—Birthplace and year of arrival

Family status and age

Level of course in 1984 and age

Level of course and age

Whether attended an educational institution, type of educational institution attended and type of attendance in 1984 and age

Persons aged 15 to 64 who attended an educational institution in 1984-

Whether attending same type of educational institution as in 1984, type of attendance and age

Persons aged 15 to 64 who attended an educational institution full-time in 1984—

Type of educational institution attended full-time in 1984, whether attending an educational institution, type of educational institution attending, type of attendance, labour force status and age

Employed persons aged 15 to 64-

Whether attended an educational institution, type of educational institution attended and type of attendance in 1984 and industry

Unemployed persons aged 15 to 64-

Whether attended an educational institution, type of educational institution attended and type of attendance in 1984, age and whether had worked full-time

Persons aged 15 to 24-

Age at time of leaving full-time education, birthplace and year of arrival

Whether attending an educational institution, type of educational institution attending, type of attendance, type of school last attended and labour force status

Leavers aged 15 to 64-

Type of educational institution attended full-time in 1984 and age Labour force status and age at time of leaving full-time education

Employed leavers aged 15 to 64-

Type of educational institution attended full-time in 1984 and age

Unemployed leavers aged 15 to 64-

Duration of unemployment—

Age at time of leaving full-time education

Duration of unemployment, type of educational institution attended full-time in 1984 and age

Apprentices-

Year of apprenticeship, year last attended an educational institution full-time and age

Field of trade, whether attended an educational institution, type of educational institution attended and type of attendance in 1984

Whether attending an educational institution, type of educational institution attending and type of attendance

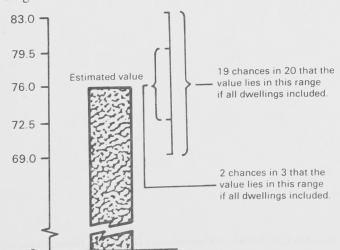

TECHNICAL NOTE

Estimation procedure

The estimates are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age and sex, rather than to the corresponding distribution within the sample itself.

Reliability of the estimates

- Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.
- 3. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors for general application is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these figures will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.
- An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 10 shows the estimated number of persons aged 15 to 24 who attended university full-time during 1984 and who were attending an educational institution at May 1985 is 76,000. Since this estimate is between 50,000 and 100,000 in the standard error table, the standard error for Australia will be between 2,950 and 3,950 and can be approximated as 3,500 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 72,500 to 79,500 and about nineteen chances in twenty that the value will fall within the range 69,000 to 83,000. This example is illustrated in the following diagram.

- 5. As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, estimates less than the lowest levels shown in the standard error table have not been published. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.
- 6. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. The formula for the relative standard error (RSE) of a proportion is given below:

RSE
$$(x/y) = \sqrt{[RSE(x)]^2 - [RSE(y)]^2}$$

- 7. Considering the example from paragraph 4 above, the 76,000 persons represent 80.3 per cent of the 94,700 persons who attended university full-time during 1984. The standard error of 94,700 is approximately 3,800 so the relative standard error is 4.0 per cent. The relative standard error for 76,000 is 4.6 per cent. Applying the above formula, the relative standard error of the proportion is $\sqrt{(4.6)^2 (4.0)^2}$ or 2.3 per cent, giving a standard error for the proportion (80.3 per cent) of 1.8 percentage points. Therefore, there are about two chances in three that the proportion of 15 to 24 year old full-time university students in 1984 attending an educational institution at May 1985 is between 78.5 per cent and 82.1 per cent and nineteen chances in twenty the proportion is within the range 76.7 per cent to 83.9 per cent.
- 8. Published figures may also be used to estimate the difference between two survey estimates (of numbers or percentages). Such a figure is itself an estimate and is therefore subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

SE (x-y) =
$$\sqrt{[SE(x)]^2 + [SE(y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics of subpopulations it is expected to provide a good approximation for all differences likely to be of interest in this publication.

9. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.
